**Standards represent important drivers in the life-sciences and technology transfer because they guarantee that data become accessible, shareable and comparable along the value chain. But there are many hurdles to overcome to be able to be as innovative as it could be. (Data exchange, material exchange, unequal preconditions in education etc.).**

In our workshop we will address the challenge to enable innovation and enter into a dialogue with representatives of various stakeholder groups discussing existing problems in the field of standardization in life sciences (& Open Science). The aim is to understand the background and needs of the respective stakeholders / interlocutors, to eliminate existing reservations and to work together for the implementation of standard policies for data exchange, material exchange, unequal educational requirements... in life sciences.

## Objectives of the workshop

With the help of lectures, a panel discussion, world cafes and poster sessions we want to present the perspective and the attitude of the "other" side and to get to know and understand their perspectives on the topics of education, technology transfer and data management aiming to a better mutual understanding, a better relationship between the partners, and ultimately to increase the efficiency of our efforts.

## Who should attend?

The workshop is open for representatives from the areas of Research, Funding, Policy, Education (including students), Industry, Standardisation bodies and Publishers.

**The workshop organising committee welcomes your abstracts for posters.** All abstracts must be submitted online. The online system will be open from August 15, 2017 through September 15, 2017. Abstracts will be reviewed and acceptance will be based on content, available space, and overall program balance.
